

SCREEN KEEP

Webpage-to-TV launch checklist

An event screen checklist for schedules, QR pages, room names, fallback URLs, and refresh.

Checklist

- Confirm the URL is stable, public-safe, and does not depend on hover-only UI.
- Use large type, strong contrast, and a layout designed for TV viewing distance.
- Remove cookie banners, modal popups, autoplay blockers, and fragile login states.
- Set refresh timing for dashboards, menus, schedules, and fast-changing pages.
- Create a fallback URL for network or source-page failure.
- Test on the actual TV size before rollout.
